

Tree Coverage

Legend

Percentage of Tree Coverage

- Less than 25% Coverage
- Approximately 25% Coverage
- Approximately 50% Coverage
- Approximately 75% Coverage
- Up to 100% Coverage
- Streets not in Inventory
- City Limits

NOTE: Coverage is based on estimation by inventory taker. It is not based on a shade survey. It includes trees in the vicinity of the sidewalk, both in front/side yards and where applicable, landscape buffers between the street and sidewalk. Where trees are planted but still immature, coverage is based on an estimate of coverage when the trees have reached maturity, as this is a tool to suggest blocks that residents may suggest for supplemental planting.
